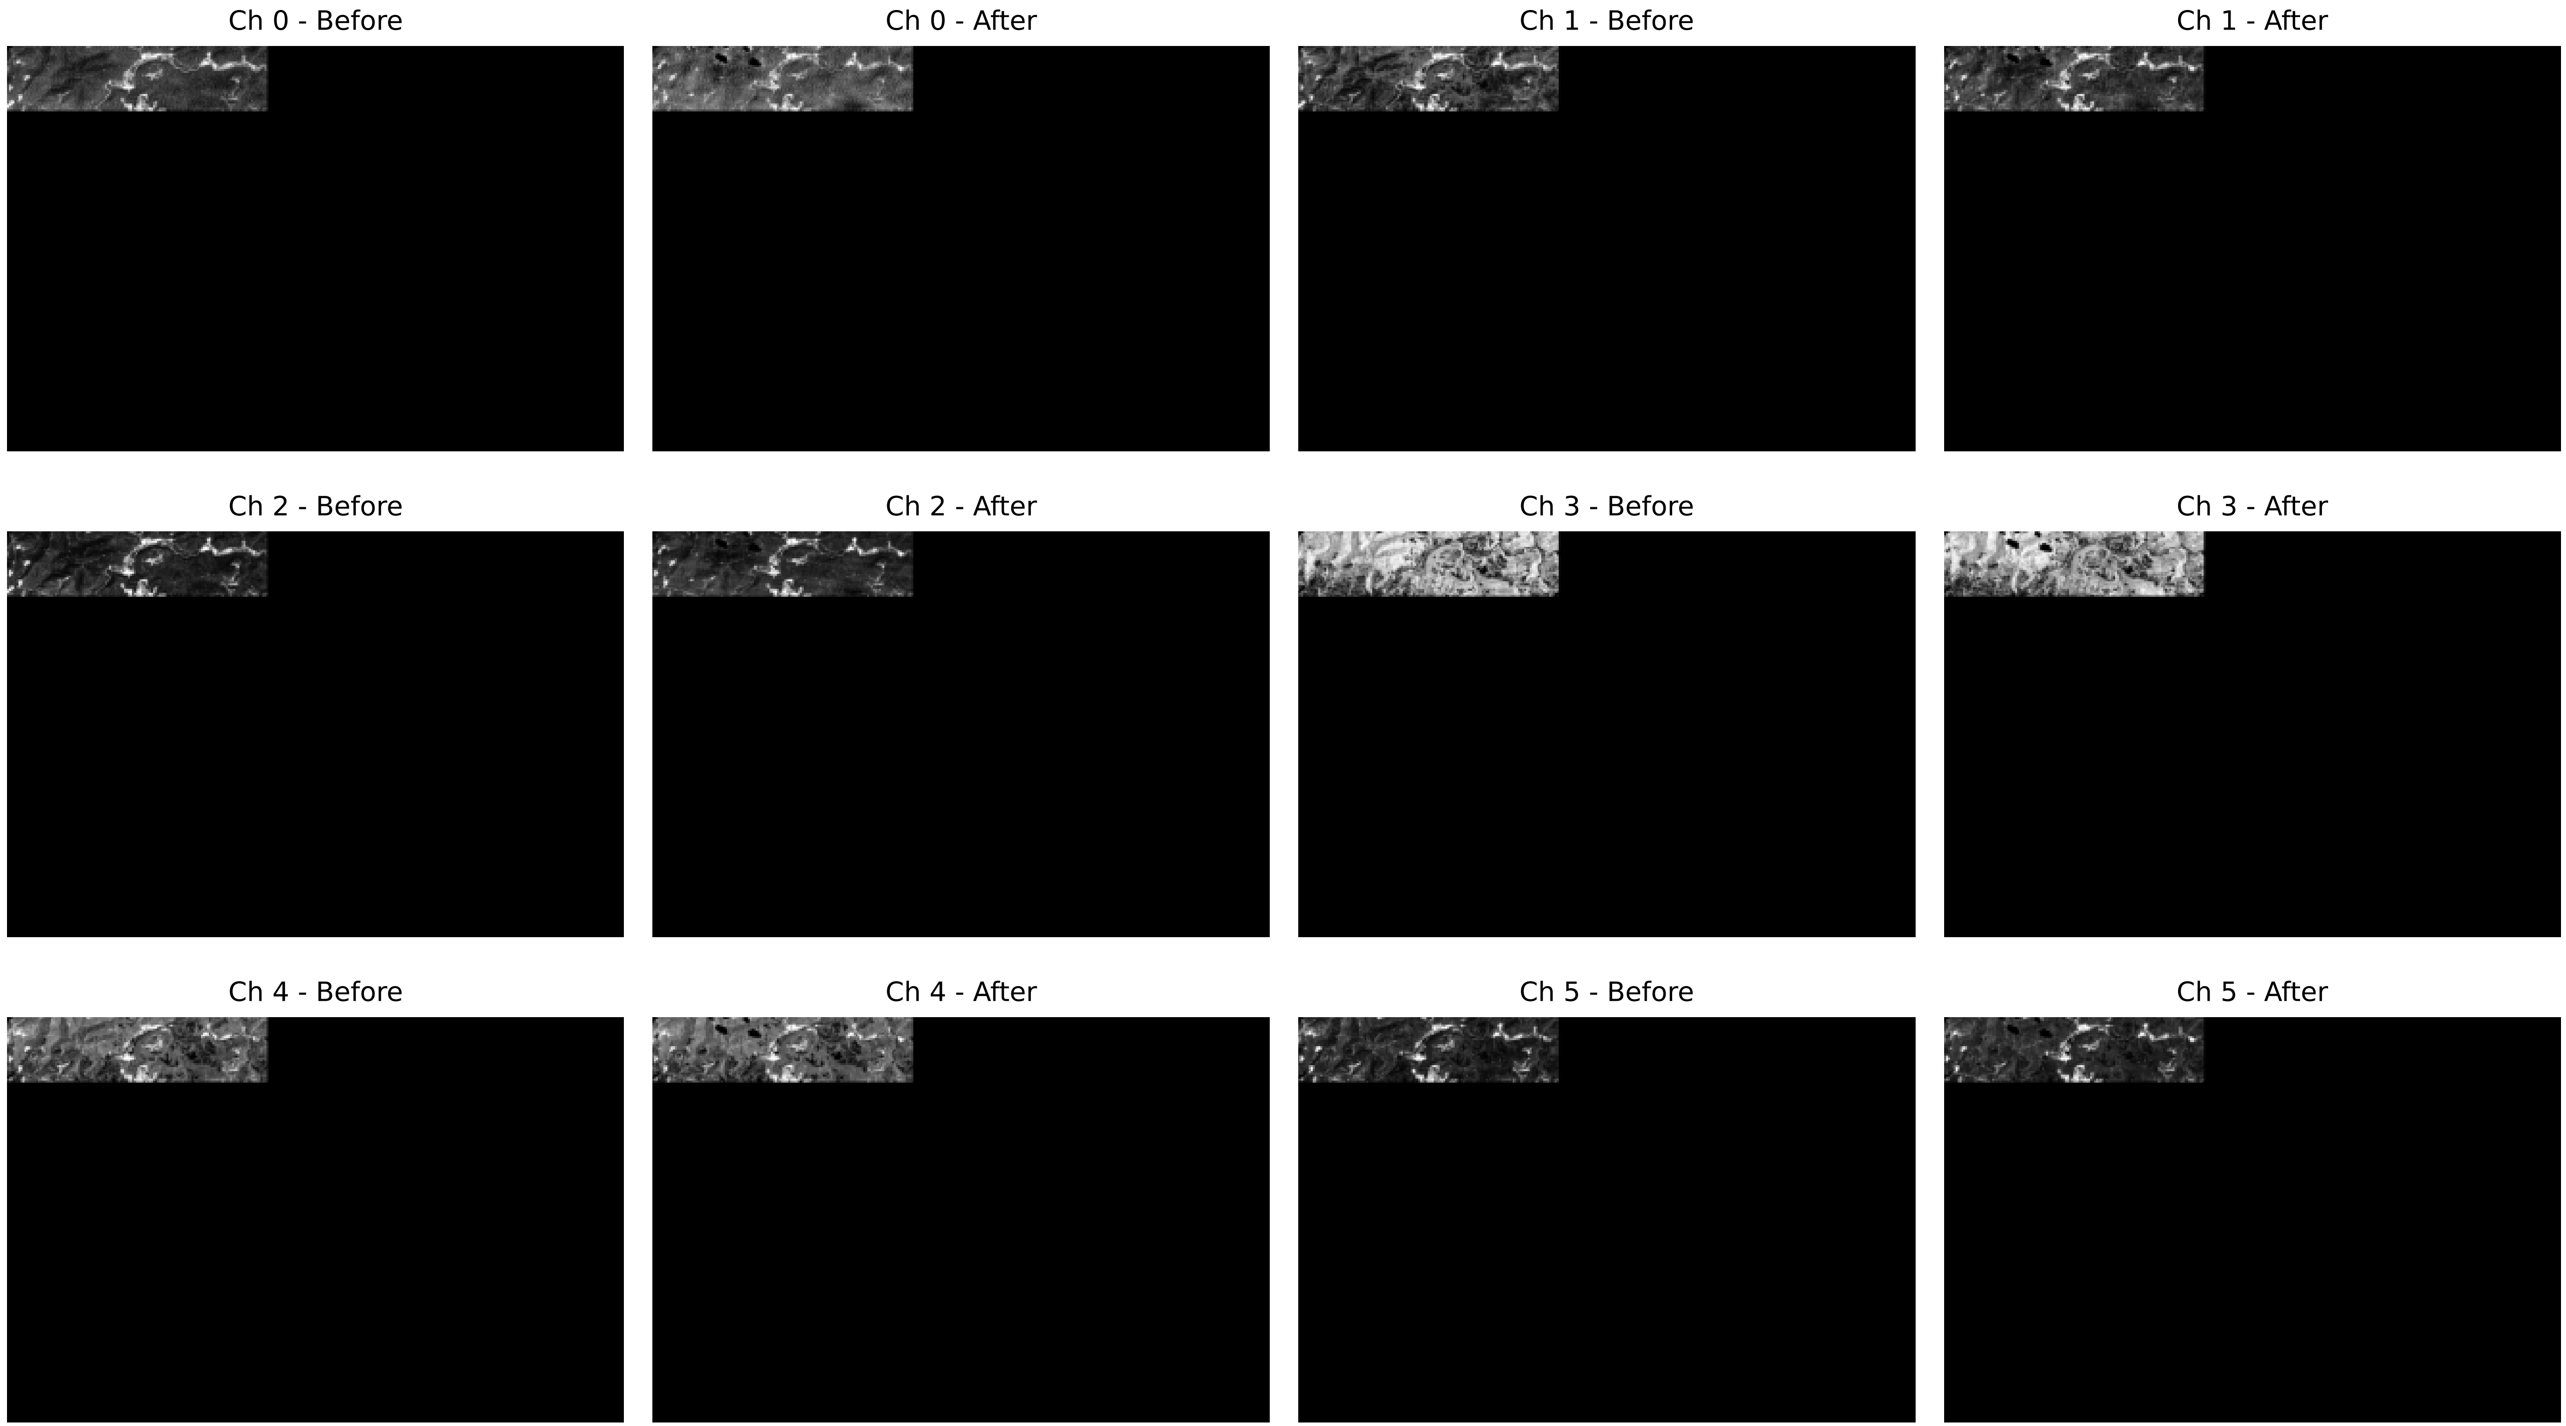
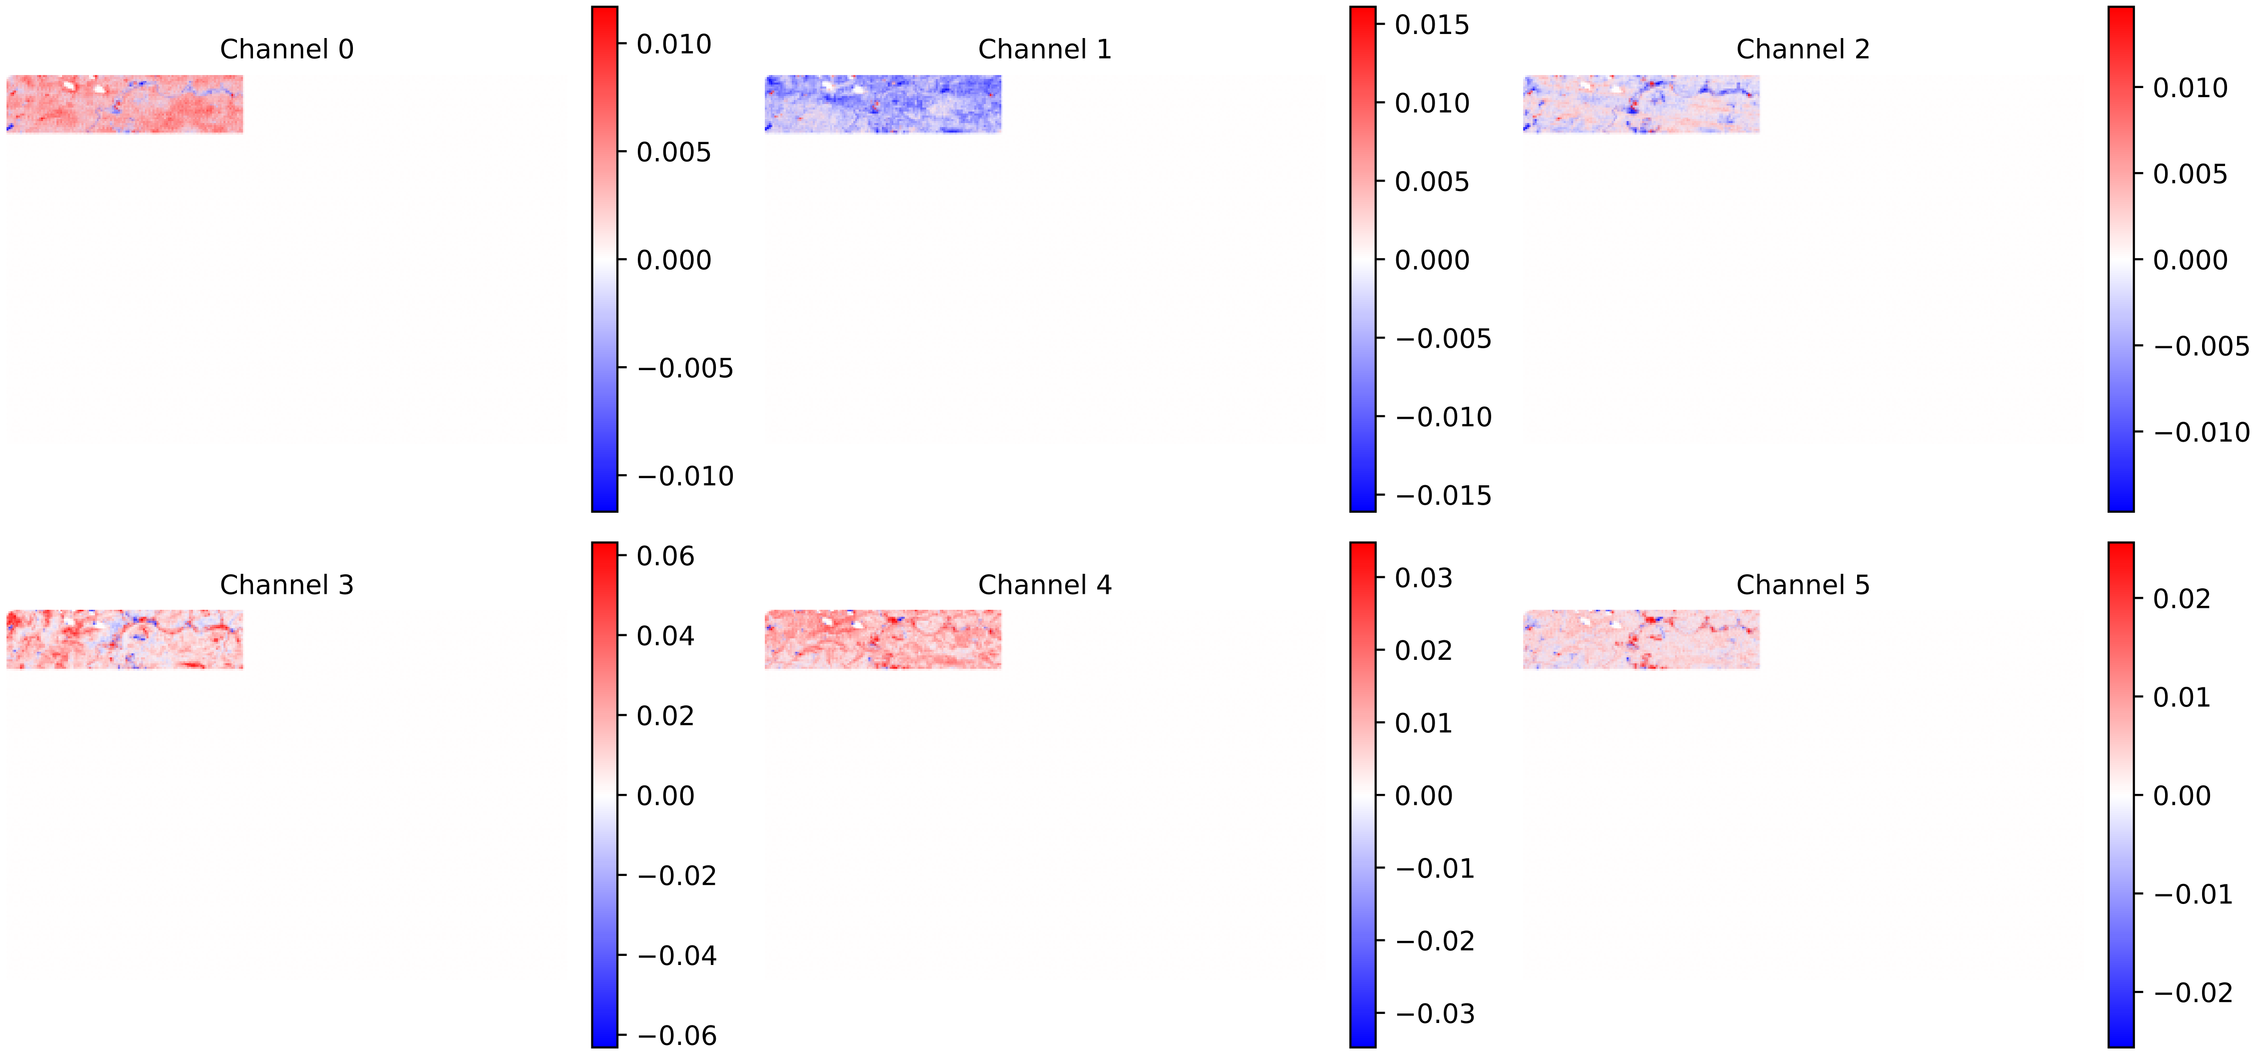
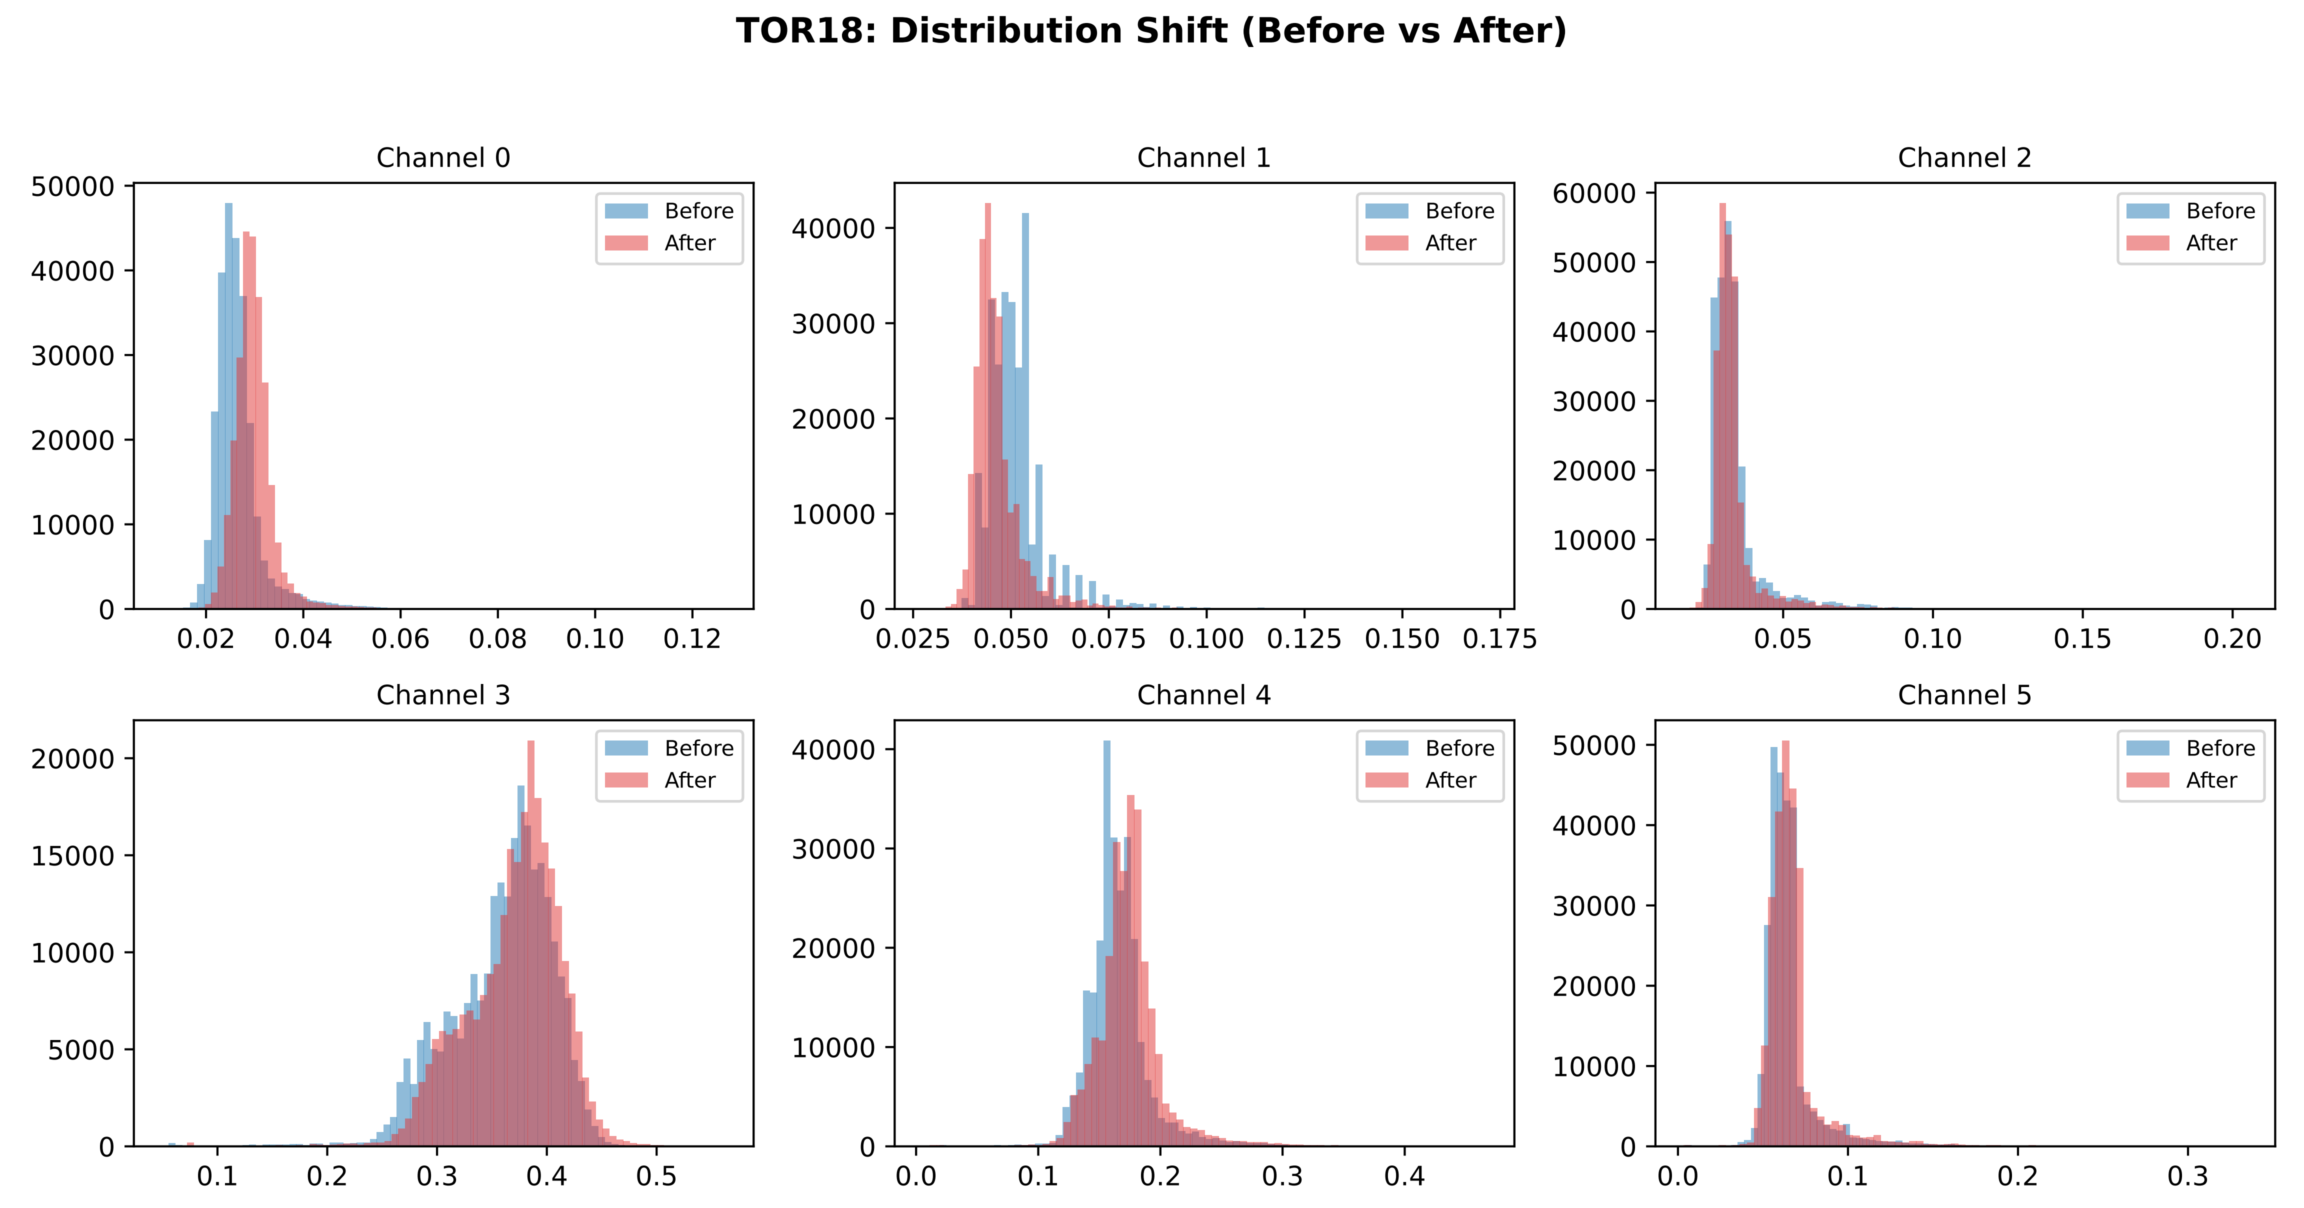
TOR18: Before vs After (per channel)



TOR18: Difference (After - Before) | Red = increased after, Blue = decreased after





TOR18: Distribution Shift (Before vs After)
Channel 0
Channel 1
Channel 2
Channel 3
Channel 4
Channel 5
Before
After

TOR18: Interpretation

Readable coverage: 6.7% of the scene has usable BEFORE+AFTER data (the rest is corrupted/unreadable source imagery and is excluded from every statistic above).

2 of 6 channels show higher variance after the event than before.

Channel 3 shows the largest mean shift (+0.0112), making it the most informative single channel for this case.

Average AFTER cross-channel correlation is +0.48 - channels are not all moving together (richer, more independent signal across bands).
