TOR12: Interpretation

Readable coverage: 11.2% of the scene has usable BEFORE+AFTER data (the rest is corrupted/unreadable source imagery and is excluded from every statistic above).

1 of 6 channels show higher variance after the event than before.

Channel 3 shows the largest mean shift (+0.1860), making it the most informative single channel for this case.

Average AFTER cross-channel correlation is +0.48 - channels are not all moving together (richer, more independent signal across bands).
