TOR24: Interpretation

Readable coverage: 66.9% of the scene has usable BEFORE+AFTER data (the rest is corrupted/unreadable source imagery and is excluded from every statistic above).

6 of 6 channels show higher variance after the event than before.

Channel 4 shows the largest mean shift (+0.0191), making it the most informative single channel for this case.

Average AFTER cross-channel correlation is +0.79 - channels are moving together (simple, mostly redundant signal).
